**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 13-15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Basso et al. (USP 6,452,368). Basso (see figure below) discloses voltage regulator circuit (18), operable to supply an output voltage signal (Vout) to a primary function circuit (load circuitry- not shown) being at a first level (normal or low load operating conditions) and a second level dependent upon the stress-enable signal (heavy or high load conditions), see columns 3 and 4. Basso also discloses an external voltage signal (28) that is operable to produce the stress-enable signal that is indicative of whether the external voltage is within a predetermined range.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Basso et al. (USP 6,452,368) in view of Pangal et al. (USP 6,445,170). Basso et al. discloses the claimed invention (see above paragraphs) except for the use of a variable resistor in a voltage dividing circuitry. Pangal discloses that it is known in the art to provide the use of a variable resistor in a voltage dividing circuitry. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the use

Art Unit: 2838

of a variable resistor in a voltage dividing circuitry of Pangal et al. with the dual mode voltage converter of Basso et al., in order to provide a control loop that would influence the variable resistors to have a reduced process sensitivity.

### ***Allowable Subject Matter***

5. Claims 4-12 and 16-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art alone or in combination discloses "the voltage divider comprises a resistor coupled in parallel with a transistor, and wherein the gate of the transistor is controlled by the stress-enable signal."
